> **Everything in the Universe is made from one type of particle.
> All workings of the Universe are result from said particle.**

THE TESLA EQUATION: TL = mc^2

There is an all encompassing lattice-type thread particle network (not the string theory type) in space (and everywhere).
The network is made from individual yet connected particles and conforms to whatever shape it is surrounding. So light traveling through a curved network (like the Earth or Sun) will of course curve.

Is gravity curving the network? No! The network itself is what creates gravity (gravity is network tension).
Does this invalidate any of Einsteins equations? Of course not, it is just another way to look at it. Einstein has field equations and this is the field (network).

The particles are connected -- that creates a network. The network has tension on it so vibrations can easily travel through it on the threads. That's what light is...

~~~~~~~~~~~~~~~~~~~~~~
WHY THE SPEED OF LIGHT IS "C"
~~~~~~~~~~~~~~~~~~~~~~

The particle itself would be just the grey threads in the picture (no color and a lot thinner of course).
It would fit perfectly inside of a dodecahedron.
Actual thread length is about one Ångström and it is fine enough were 10 threads (20 radii) could curl-up into the size of a neutron.

There is a high tension thread particle network in space (not the string theory type). Everything is connected by the particle network and it moves along with largest mass in proximity (something like what gravitational fields would be doing).
A good 2-D model would be something like a spiders web (individual thread lengths are approximately one Ångström).
Now imagine an infinite 3-D spiders web. If a vibration was set off in it, it would travel forever and the speed the vibrations travel (through the net) is the speed of light (that's actually what light is, a vibration traveling through a thread particle network)
The speed vibrations travel through the particle network is the speed of light "c"
The particle network threads have a certain amount of tension, length and mass. That makes 'c' the speed it is. If the tension, length or mass changed so would 'c'

Here is a regular thread tension formula...

Tension = velocity squared x mass / Length

If we plug c in and rearrange we get the one-inch formula... TL = mc^2

Incorporates thread tension and length, mass, speed of light, time.
Equation itself explains their correlation and gives understanding of the way energy, forces and everything else truly works. Mechanical reason for c in E=mc^2
Both sides of the equation are in joules or energy... equivalent to "E".
It means the Tension of the threads in space times their length is equal to their energy.
This is why the speed of light is involved in Einsteins mass energy equivalence equation...

E = mc^2

...and actually why light travels at the speed of light...
I always wondered why... now I know.
It had to be something mechanical... tension and thread lengths!

So, you can arrive at Einsteins famous formula from completely different directions.
You can think energy is contained in mass and released.

E = mc^2

Or you can think there is a particle network of threads and mass is inert, the energy is only potential...
released (actually pulled) by tension on the threads.

TL = mc^2

They are equivalent. Which is correct? You do not know.

Tesla was correct...
"There is no energy in matter other than that received from the environment." - Nikola Tesla

Mnemonic memory device...
E for Einstein: E = mc^2
TL for Tesla: TL = mc^2

You can extrapolate anything and everything from it.

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
MASS IS INERT -- ALL ENERGY COMES FROM SPACE
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
If you have a tennis net (2-D lattice-type thread particle network analogy) it has an overall tension on it.
The net threads are being pulled from the extremities (if it were an infinite net the tension pull would be
coming from infinity).
If you use a pair of scissors and snip one thread in the middle of the net... vibrations (energy) will travel
through the net (remember the tennis net has tension on it).
Every individual section (particle) of the net has tension and can release energy into the net. But you
cannot add the individual particle energies together and create a massive sum -- because all of the
supposed different energies are all one and the same -- coming from the net as a whole.
If a guitar string has a tension of 9 . So does every point on the string.

~ ~ ~ ~ ~ ▮ ~ ~ ~ ~ ~ ▮ ~ ~ ~ ~ ~ ▮ ~ ~ ~ ~ ~ ▮ ~ ~ ~ ~ ~ ▮ ~ ~ ~ ~ ~

But you cannot add them together. That would be pure stupidity. The same type of thing has unknowingly
happened with the vacuum catastrophe. Space is loaded with energy but it is all from the same source and
it is all the same energy. If this is not realized -- there would be an enormous mistake -- 10^120 -- in
calculations.

~~~~~~~~~~~~~~~~~~~
THERE IS NO PURE ENERGY
~~~~~~~~~~~~~~~~~~~
If a few threads of the net were balled-up (pulled together in a clump) then suddenly unballed (decayed). It
would send vibrations through the net.
The balled up piece of the net would be considered mass and when it unballs it reverts back to normal net
(thread particle network) and releases energy (vibrations) into the net. The vibrations are the energy. You
cannot have vibrations travelling in nothing -- thinking that would be pure stupidity.

```
+++++++++++++++++++++++
++++++‡++++++++‡++++++
++++‡‡●‡‡‡‡‡‡●‡‡++++
++++++‡++++++++‡++++++
```

The graphic is a representation of a 2-D gravitational network.
It would be made of only the XY axis particles attached
together (like a tennis net but made from individual particles).
The particles are connected -- that creates a network. The
network has tension on it so vibrations can easily travel

+++++++++++++++++++++   through it on the threads. Any masses ●● in the network will
                         have a higher tension between them and pull together --

that's gravity.
The speed vibrations travel through the particle network is the speed of light "c"

~~~~~~~~~~~~~~~~~~~~~~~~~~
ENERGY CANNOT BE OUT ON ITS OWN
~~~~~~~~~~~~~~~~~~~~~~~~~~
Is energy equal to length? How about speed? Is speed equal to mass? No, of course not.
So everyone needs to stop saying mass and energy are equal -- they are not equal.

Everyone has the wrong idea of what energy, forces and fields are.
Energy is a particle vibration or movement.
You cannot have energy without a mass, energy is mass vibrating.
Energy cannot be out on its own. (a supposed mass-less particle is a particle nonetheless, but there are no
mass-less particles, so that's irrelevant)

Same thing goes for forces.
A force is a group of particles arranged in a network pulling each other... and all of the particles absolutely
have to be physically connected.

A force (a group of connected particles) can only push very short distances and in rare circumstances like
same pole magnets.

But the point is... a force has to have particles involved.
A force cannot be out on its own.

Most of mainstream physics is a misconception.

There is no such thing as pure energy.
Again... Energy is a vibration on a particle (or particle movement).

Can energy be converted into mass?
Ummm... no, energy already has mass involved, it is a particle vibration or movement. There is no pure
energy and you are not going to convert energy into mass.

Think of a guitar string. If you pluck it... that is the energy. If you remove the guitar string from the
scenario... can you still have the energy? No, of course not.

Can you convert the guitar string vibration into mass? No... that is ridiculous.

Look at what everything really is...

~~~~~~~~~~~~~~~~~
DIMENSIONS AND UNITS
~~~~~~~~~~~~~~~~~
```
........mass = [M] = kilograms
......length = [L] = meters
........time = [T] = seconds
...frequency = [T^-1] = seconds^-1
......speed = [L]/[T] ...... = m/s
acceleration = [L]/[T^2] .... = m/s^2
....momentum = [M][L]/[T] ... = kg_m/s
.......force = [M][L]/[T^2] . = kg_m/s^2
......energy = [M][L^2]/[T^2] = kg_m^2/s^2
.......power = [M][L^2]/[T^3] = kg_m^2/s^3
```

Notice mass [M] is not equal to energy [M] [L^2] / [T^2] ...the vibration is missing

Here is what Einsteins famous equation really looks like...

[M] [L^2] / [T^2] = [M] [L^2] / [T^2]

Energy already is a mass times speed^2.

If you could just lop-off parts of an equation and claim whatever is left is equal... i.e. "energy equals mass" then you could also say that "power equals mass" and so does momentum and force. It is really stupid to think like that.
Speed is NOT equal to length. Speed is equal to length divided by time.
Energy is NOT equal to mass. Energy is equal to mass times speed squared.

READ THIS CAREFULLY: Energy is just a word for vibrating mass. It's like "RED" -- you can have a beautiful redheaded girlfriend, a red ball or a red firetruck -- but you cannot have just "red."
Could there be a blob of "red" floating around in outer space? NO! it would have to be made from something.
RED is a word to describe a property of something else.
ENERGY is a word to describe a property of something else.
The term "Pure Energy" came from Spock on Star Trek. That is SciFi.

~~~~~~~~~~~~~~
TENSION IS A FORCE
~~~~~~~~~~~~~~
NOTE: The " T " in the equation... `TL = mc^2` **...below is tension and that's a force.**
`NOTE: The [T]'s inside brackets below are [time]`

Tension times Length is equal to Energy.

```
 TL = mc^2
|--inch--|
```

`tension [M][L]/[T^2] * length [L] = mass [M] * speed c^2 [L^2]/[T^2]`
