

Flux Particle Theory

by James Cranwell
<http://www.mccelt.com/>

**Everything in the Universe is made from one type of thread.
All workings of the Universe are result from said thread.**

YOU ARE FOOLED INTO BELIEVING THE TRUTH

~~~~~  
**You are 3-D but really 1-D but really 3-D**  
~~~~~

We do not live in world of ghosts and magic.

Everything is made from threads (not the string theory type).

Threads (from any theory) are supposedly one dimensional 1-D.

Clusters of threads form protons, neutrons, electrons and when they group together they make atoms. Atoms of course form everything matter - that includes you.

You think you are 3-D but you are actually made from 1-D threads

The thread cluster itself would be just the grey threads (or strings) in the picture (no color and a lot thinner of course). It would fit perfectly inside of a [dodecahedron](#). Actual thread (or string) length is about one Ångström and it is fine enough where 10 threads (20 radii) could curl-up into the size of a neutron.

A thread of course has a length but it would also have to have an infinitesimally small thickness, that would give it a height and width, or three dimensions 3-D.

So, you are fooled into thinking you are 3-D because you are made from an assemblage of 1-D threads that form 3-D structures (like a wire sculpture). But the 1-D threads actually **are** 3-D. So, that means...

You are fooled into believing the truth.

~~~~~  
**DIMENSIONS**  
 ~~~~~

There is NO Universal instruction manual. Self-assembly and automatic formation are the only way anything and everything could have happened.

The Universe and everything in it has to form and work automatically, period.

Everyone knows atoms are mostly empty space and therefore nothing is solid.

So, there cannot be things like solid 3 dimensional cubes nor spheres.

Two dimensional planes also get ruled out.

A two dimensional plane (like a sheet of paper) would be a slice of a supposedly solid 3-D cube and that would make it a 2-D solid.

There are no such things as solid cubes, so, you cannot take a slice from one. Nothing is solid so the paper-like plane gets canceled when you figure things based on actual reality.

The way dimensions work is simple - everything is made from quantum threads and the number of axis equals dimension...

A line ----- is of course 1-D

Plus signs ++++++ would be 2-D and a bunch of 2-D threads can form something like a tennis net. etc.

Got that?

The basic 2-D unit would be a plus-sign + , NOT a plane.

10 dimensions or 10-D is the axis of the dodecahedron - that's a Platonic solid - an automatic shape. It would look like a 3-D * asterisk * and it is the basis for everything.

It has 10 axis (that's 20 radii) and it forms automatically - that is the only way things can happen at the basic (quantum) level.

The thread cluster itself would be just the grey threads in the picture (no color and a lot thinner of course).

It would fit perfectly inside of a dodecahedron.

Actual thread length is about one Ångström and it is fine enough were 10 threads (20 radii) could curl-up into the size of a neutron.

Is Rumpelstiltskin true? Of course not and that is easy to know.

But if you have something like String Theory - they use 10, 11, or 26 dimensions.

The math for all of them is correct but only one of them (if any) can actually be truly correct.

Math is like an unprovable story and you know most of it is either fiction or just plain wrong.
