

Flux Particle Theory

by James Cranwell

<http://www.mccelt.com/>

**Everything in the Universe is made from one type of particle.
All workings of the Universe are result from said particle.**

BLACK HOLES SQUEEZE ENERGY FROM MATTER & CREATE MIGHTY JETS

~~~~~

### What Powers A Black-Holes Mighty Jets?

~~~~~

That's easy, energy is just particle vibrations.
When particles, matter, and space itself are sucked into a black-hole -- everything becomes flattened down and unable to vibrate.

The vibrations cannot just stop, they have to transfer-out-of / leave the material they were vibrating in.

Got it? Atoms are mostly empty space and they are loaded with vibrations.

If you squashed an atom down flat (no more empty space) the vibe would have to leave.
Think of a truck load of guitar strings, they would not be able to vibrate. It would be an inert lump of strings.

So what's happening is the Black Hole is squeezing the energy out of everything and the jets are the exit (or the drain if you like).

~~~~~

### ENERGY CANNOT BE OUT ON ITS OWN

~~~~~

Is energy equal to length? How about speed? Is speed equal to mass? No, of course not.
So everyone needs to stop saying mass and energy are equal -- they are not equal.

Everyone has the wrong idea of what energy, forces and fields are.
Energy is a particle (anything of substance) vibration or movement.
You cannot have energy without substance, energy is mass (or substance) vibrating.
Energy cannot be out on its own. (a supposed mass-less particle is a particle nonetheless, but there are no mass-less particles, so that's irrelevant)

Same thing goes for forces.
A force is a group of particles arranged in a network pulling each other... and all of the particles absolutely have to be physically connected.

A force (a group of connected particles) can only push very short distances and in rare circumstances like same pole magnets.

But the point is... a force has to have particles involved.
A force cannot be out on its own.

Most of mainstream physics is a misconception.

There is no such thing as pure energy.
Again... Energy is a vibration on a particle (or particle movement).

Can energy be converted into mass?
Ummm... no, energy already has mass involved, it is a particle vibration or movement. There is no pure energy and you are not going to convert energy into mass.

The particle itself would be just the grey threads (or strings) in the picture (no color and a lot thinner of course).
It would fit perfectly inside of a **dodecahedron**.
Actual thread (or string) length is about one \square ngstr \square m and it is fine enough where 10 threads (20 radii) could curl-up into the size of a neutron.

Think of a guitar string. If you pluck it... that is the energy. If you remove the guitar string from the scenario... can you still have the energy? No, of course not.

Can you convert the guitar string vibration into mass? No... that is ridiculous.

Look at what everything really is...

~~~~~  
**DIMENSIONS AND UNITS**  
 ~~~~~

.....mass = [M] = kilograms
length = [L] = meters
time = [T] = seconds
 ...frequency = [T⁻¹] = seconds⁻¹
speed = [L]/[T] = m/s
 acceleration = [L]/[T²] = m/s²
momentum = [M] [L]/[T] ... = kg_m/s
force = [M] [L]/[T²] . = kg_m/s²
energy = [M] [L²]/[T²] = kg_m²/s²
power = [M] [L²]/[T³] = kg_m²/s³

Tension is a Force. Gravity is a Force. A Newton is a Unit of Force.

Velocity is the same as speed = [L]/[T]

NOTE FOR NITPICKERS: I know velocity has a direction. That does NOT matter. This is about dimensions and units. Also, they have the wrong model of energy (and or other things) it does NOT matter what direction they think it is going.

Notice mass [M] is not equal to energy [M] [L²] / [T²] ...the vibration is missing

Here is what Einsteins famous equation really looks like...

$$[M] [L^2] / [T^2] = [M] [L^2] / [T^2]$$

Energy already is a mass times speed².

If you could just lop-off parts of an equation and claim whatever is left is equal... i.e. "energy equals mass" then you could also say that "power equals mass" and so does momentum and force. It is really stupid to think like that.

Speed is NOT equal to length. Speed is equal to length divided by time.

Energy is NOT equal to mass. Energy is equal to mass times speed squared.

READ THIS CAREFULLY: Energy is just a word for vibrating mass (or substance). It's like "RED" -- you can have a beautiful redheaded girlfriend, a red ball or a red firetruck -- but you cannot have just "red."

Could there be a blob of "red" floating around in outer space? NO! it would have to be made from something.

RED is a word to describe a property of something else.

ENERGY is a word to describe a property of something else.

The term "Pure Energy" came from Spock on Star Trek. That is SciFi.

NOTE: There is no such thing as pure energy so the vibrations leaving the Black Hole cannot just stop. When the vibrations transfer-out-of / leave the Black Hole they must travel through a particle field made from actual particles (or something that is real / something of some type of substance) -- stuff does NOT work by magic.

Got it? You can squash matter or any substance but you cannot squash energy. Energy is the vibration on the substance
